

Consumer Documents Project

For the first part of the project your group (two or three people) will need to create consumer documents for a product you designed and created. The product can be an original invention or an improvement on an existing one. For example I would create a teleportation device that would transport me from one place to another. Or maybe you create a car that runs on solar power. Whatever you decide to create, you will need to have the following items submitted by the due date:

1. Product information sheet (one page with text and graphics)
2. Warranty (one page all text)
3. Instructional manual (At least three pages with text and graphics)
4. Technical instructions (At least one page)
5. Drawing or three-dimensional representation of the item.
6. Company name and logo
7. Product name and logo

All work must be typed or completed in a neat fashion as if you were submitting the documents to be published and produced. An iPod is a perfect example of this assignment. Apple, company name, created an iPod, product, which stores lots of media and is easy to use. Before you buy an iPod you may pick up an information sheet which tells you all the features and specifications of the product. When you purchase the iPod you get instructions, warranty information, and the device with appropriate accessories.

If you need more information about the assignment you can review consumer documents on page 948 out of your textbook. In addition, I will post examples of the documents on my web page.

Due Date: _____

Part II

The second part of this project will be an oral presentation utilizing PowerPoint to present your product to the class. All seven items will need to be converted and incorporated into a PowerPoint Presentation. In addition, you will need to have a title page, bio sheet for the people in your group, and a fictional contact/more info page for a total of at least ten slides. We will spend time in class learning how to use PowerPoint and additional time will be given to complete the project. I will provide more details about the assignment after we finish part I.
